was in a low gully where crops would not grow, and no one within the community would buy it.

Land is frequently pawned by farmers as security on a loan. The title to the land is left with the lender, who can foreclose on the debt if the interest payments of five percent per month are not paid. Often the land pawned may be worth far more than the loan. Loans in town are rarely backed with security, and if something is pawned, it is usually clothing or household items.

With the growing sighificance of ejido lands and land sale, inheritance of land is of less importance in the economic expectations of each successive generation. The rules controlling inheritance are theoretically simple: equal inheritance for all children regardless of sex. The parents usually give some land when the child establishes a separate household; the remainder is then given at the death of the parent or when old age makes it impossible for the parent to work any more. The youngest child remaining at home works his father's land, or if he is living with his wife's family, his father-in-law's land, until the latter's death. His family inherits the house site as well as an equal share of the privately held lands. Complications arise because of modifications of the basic rule of equal inheritance by provisions for care and maintenance of the aged parents. Frequent disputes over inheritance are settled in local courts or passed on to the Department of Indian Affairs in San Cristóbal.

The selection of which crop to grow is related to the kind and amount of land a farmer owns. The most important crops are corn, beans, and wheat. Some squash and sugarcane are grown in the lower ejido lands of San Caralampio. Cabbage is grown by one Indian who possesses fertile irrigated lands in the center. Most Indians, however, are unwilling to undertake the risk of raising a cash crop since there is greater chance of the crop being stolen and they cannot afford a bad market price when they harvest.

Relating the size of holding to the crop grown, according to figures in the Mexican census of 1960[3] (Table 4) one can see that in privately

3. The census figures are based on estimates received from town officials, who submit them monthly to the census bureau. The officials of the town question the household heads as they see them in the streets or in their houses about how much seed they planted. They then estimate what the yield per almud for good and bad land is, from their own crops.

owned plots of less than five hectares, corn is clearly the major crop, with 83 percent of the land devoted to its production. In the ejido lands, it is cultivated on less than 50 percent of the land, with wheat and beans sharing the remaining lands. Included in the category of ownership of five hectares or more are three large fincas where cattle fodder is grown. These fincas employ eighty-three laborers, some of whom live in the town center.

Since the Mexican census figures do not take into account the total land holdings of the household, I shall refer to the data on land use from my own census in 1964 (Table 5). Beans are grown (except in three cases) only if the household has more than the one hectare of ejido land grant. Corn and beans are grown together only on irrigated lands, both in high lands and in low country. Most farmers with ejido land grow wheat in addition to corn only when the land is in continual production, since it is believed that wheat gives "heat" to the land and improves the soil. This belief is supported by the real value of crop rotation.

Decisions concerning what crops to plant where are based on two sets of criteria: topology and soil characteristics. These criteria, furthermore, are the basis for determining what kinds of seed should be planted and what techniques of cultivation should be utilized.

Topological criteria. Because of the relative wealth of land resources, the steep hills are left uncultivated. All of the steep hills are communally owned, and the second growth of pine and scrub oak provides firewood. Tall pine growing in the higher lands of the colonia of San Vicente is sold by the community to private lumber companies.

The "belly of the land," the mound-like hillocks at the bottom of the hills, are sometimes cultivated or used for pasturage. On hilly lands farmers put rocks in the banks or curve the rows of corn to avoid erosion. The very low lands of the valley floor must be drained by digging ditches.

The flat irrigated lands of the valley floor are the most desirable lands for cultivation. The Indians are reluctant to sell these lands, and hold on to them until they are forced to sell.

When the officials reach concensus on what the mean yield (or *medio calculo* as they call it) is, they multiply this by the known amount of seed planted. Every six years a house-to-house census of what was planted is made.

621 Among its duties are those of keeping[46] vital statistics for
659 the National Population Bureau which are sent to the state office,
392 solving cases of adultery and theft, collecting the fiesta and
351 Ejido taxes, keeping the streets clean, building and repairing
363 roads and public buildings, and also taking charge of the local
491 jail. Ayuntamiento officers are also called in to prevent or solve
499 witchcraft cases and give advice and reprimands to misbehaving
344 wives, sons and other relatives when the household or the responsible
754 relatives cannot deal with the case on their own.
626

621 The Ayuntamiento also keeps its own corn field, worked by
423 communal labor, whose crop is sold to collect funds for its own
432 expenses.
434

794 The Mayordomia, or religious body, performs the formal activities on the religious holidays, is the custodian of the sacred objects (rockets, church keys, bells) connected with the Church, and the authority which carries out the tasks required by all of man's peaceful relations with the supernatural on the village level.

They are responsible as a group for the upkeep of the Church building and saint images, and the preparations for and the performance of Church Fiestas, regular church meetings, etc. Among their duties are those of providing meals for the priest while he is in town, helping during mass, contracting musicians and collecting the Church limosna during mass.

621 This structural level lacks monopoly of either of these functions in relation to other less inclusive social units. Social control and religious activity are carried on at the level of the barrio, the extended family, and within the household, and religious activity can be carried on by individuals.
